Doug and Susie -- EPA has conducted a QA/QC evaluation of the EW Subsurface Data Report. The results of our evaluation indicated several QC indicators were missed. However, the data were still adequately flagged during validation. From a QA/QC perspective the data are acceptable for CERCLA decision making and there are no major defects that affect the quality of the data reported.

Should you have any questions, please contact me.

regards,

Ravi

Subject: EW Subsurface data report

Ravi,

Here is the EW subsurface sediment data report. I have sent hard copies of the maps to EPA and the ACOE for your review. The appendices and electronic versions of the maps will be available on the EW website. Anchor will send a notification with log in directions when the files are available. The results of the geotechnical investigation will be Appendix I and that appendix will be available after Thanksgiving. The laboratory data packages and validation reports have been provided to the EPA QA office for their review. Please let me know if you have any questions or concerns as you review the report.

Thanks.  
Susie
